

Tester Slot Probe

warehouse automation rollout
a connected, automated warehouse operation across six distribution sites

Updating industries

diconium 2025

01

migration strategy

how we deliver the rollout

assess

we audit your existing warehouse systems, floor layout and data readiness before any hardware moves.

integrate

we deploy the automation layer and connect it to your warehouse management and ERP systems.

validate

we run parallel operations, train your teams and hand over a proven, measured system.

each phase closes with a documented go or no-go decision.

what the rollout delivers

40%

throughput gain per site

2,400

labour hours returned each year

18

weeks to first site live

6 sites

sequenced so each rollout informs the next

99.5%

pick accuracy target after stabilisation

rollout schedule

q1 2025

assessment, site surveys and target operating model agreed.

q2 2025

automation deployed at the lead site and integrated end to end.

q3 2025

validation, team training and staged go-live across remaining sites.

after go-live

we stay on for a stabilisation period at every site.
